SUBWAY TILES FROM ALLOY

Australian metal tile designer and manufacturer Alloy has introduced the metal Subway tile, bringing a sleek, industrial sensibility to the early twentieth-century icon.

Subway tiles have a long history in public places and are now popular in contemporary bars and restaurants for their ability to evoke big-city, turn-of-the-century charm. Alloy brings the Subway tile squarely into the twenty-first century in a striking array of solid metal finishes.

Immaculately designed with a finely rounded edge and crafted from a single sheet of the highest quality 1.6-mm thick metal to create an unsurpassed finish, the Subway tile is available in all of Alloy's high-quality metals and finishes including copper, stainless steel, raw steel, brass and titanium.

Item 29 | Enquire at productnews.com.au or complete the card.

Alloy's 76 mm x 152 mm Subway tiles in copper make a striking statement.

VINOVA PANELS BY KNAUF

Create functional wall and ceiling design elements with bold designs using Knauf Vinova panels, which can also improve acoustics.

Knauf Vinova makes bold designs come alive. Wall and ceilings surpass their structural function to become functional design elements with a powerful character.

With Knauf Vinova, concert halls take on striking appearances while providing melodious acoustics; airports benefit from international ground-breaking designs; hotels and hospitals are given practical and harmonious finishes; and company offices and headquarters get city-slick looks with balanced acoustics.

Knauf Vinova is made from fibre-reinforced gypsum panels. The fibre acts like armour, making the panels practically non-combustible. Installation is carried out with the support of a simple substructure and clip system.

EPISTAR LED DOWNLIGHT BY LIGHT INDUSTRY

Studio Italia's latest product, the Epistar adjustable downlight, is available in a 10-W or 13-W chips on board (COB) LED. With a warm, white light output and 78-mm diameter, the LED downlight is C-tick certified and offers 30,000-plus hours of usage. The light features a glass cover and the LED source is well recessed to reduce glare.

A special price exclusive to readers of *Architectural Product News* is available for the Epistar 10-W non-dimmable downlight (which is equivalent to a 35-W halogen) and the Epistar 13-W dimmable or non-dimmable downlights (which are equivalent to a 50-W halogen). To receive this special offer a minimum of 10 items must be purchased.

Fill out the enquiry card for more information.
