Precious metals

Metal tiles add a touch of glitter and shine to any area of the home – both inside and out

In a product savvy marketplace, it is becoming increasingly difficult to find a truly individualised look.

However, when it comes to tiling, Alloy offers something out of the ordinary, says design director Jonathon Worner.

"Our range fulfils a growing demand by architects and designers for well-designed, high-quality metal tiles for use in modern interiors and exteriors."

Alloy uses only solid metals in the manufacturing of its tiles, resulting in strength and durability. Tiles contain no

backing mesh, plastic inserts or metal-look coatings.

"Each piece is carefully designed and finely machined in our factory from one solid sheet, imbuing each with a solid weight and tactility," says Worner.

As the tiles are made from stainless steel, copper, titanium and raw steel, they can be used in myriad applications.

This page: Alloy stainless steel tiles come in a matte, brushed or mirror finish. Each creates a different effect as light is reflected.

Worner says they are especially effective in bathrooms, kitchens and water features.

All tiles are available in a range of shapes and sizes. Stainless steel tiles come in a brushed, matte or mirror finish. The brushed finish tiles are randomly oriented in different directions to create individual patterns and effects.

For details, contact Alloy, Artedomus Building, Level 1, 46a Euston Rd, Alexandria, Sydney, NSW, phone (02) 9565 2422. Email: trend@alloydesign.com.au. Website: www.alloydesign.com.au.
